DENTISTRY

Delivering perfect teeth esthetics and restorations in the anterior and posterior using an innovative “non-prep” procedure

AIMS OF THE COURSE

Speaking about tooth esthetics and restorations, patients frequently choose to either get a treatment option using a direct composite method or, in more severe cases, an indirect method using either ceramic or zirconia.

These methods are well known to both patients and dentists. Yet, there are disadvantages to these methods such as discoloration, invasive tooth preparation and materials that do not provide natural comfort due to their hardness. Moreover, these techniques require additional steps like anesthesia, impressions, temporary restorations, etc. to finalize the treatment – not to mention the high costs for the dentists and patients.

Dr. Stephan Lampl and his edelweiss dentistry team are very proud to announce a great alternative to the above-mentioned methods. Our technology does not rely on additional equipment and extra costs. Instead we use pre-fabricated highly strengthened and modified nanohybrid material – exhibiting the natural characteristics of a tooth – that can be shaped and adjusted to the patients' individual needs.

edelweiss dentistry welcomes you to their Headquarters in Wolfurt, Austria and invite you to experience a novelty in the dental world. You will experience first-hand expertise from lectures, hands-on work-shops and live patient demonstrations and be able to interact on a one-on-one basis with speakers from all over the world.

Dear Doctor, we welcome you to the edelweiss dentistry family!

Please note: edelweiss dentistry products gmbh is not responsible for any liabilities as a result of any personal injuries or exceptional incidents.

Course language: English

The Opportunity:

Bring your patient`s plaster models and analyze the cases under professional supervision during the Hands-on course. Please take into consideration that many patient cases are suitable for starting to work successfully with edelweiss dentistry products. However, some cases may be refused due to situations, such as severe crowding for instance. Therefore: for evaluation purposes, pictures of plaster models need to be sent to your dealer prior to the course.
