

edelweiss dentistry develops 100 % alcohol- free disinfectant that kills all viruses and bacteria

BENEFITS

- 100 % without alcohol
- Kills 99.9 % bacteria/viruses
- Immediate and long-lasting effect
- Ideal for hand and surface disinfection
- Dermatologically tested
– also suitable for children
- Biodegradable

HOW IT WORKS?

edelweiss DISINFECTANT reacts with organic portion of bacterial and viral cells, causing several cellular processes to be interrupted. The chlorine dioxide breaks down the amino acids and the RNA in the bacterial/virus cell, preventing the production of proteins thereby completely killing the bacteria/virus.

WHY ALCOHOL FREE?

Alcohol-based disinfectants evaporate very quickly and may gradually lose their effectiveness. Furthermore alcohol is harsh and may cause skin irritations,

therefore especially children and individuals with sensitive skin should avoid common alcohol based disinfectants.

THE SMART SOLUTION

edelweiss dentistry has an innovative disinfectant that consists mainly of chlorine dioxide and hydrogen peroxide, it's 100 % alcohol free but still ensuring you reliable and long lasting protection.

With the edelweiss DISINFECTANT, a product has now been achieved that eliminates the disadvantages of alcohol based disinfectants as it works on the basis of chlorine dioxide.

Being alcohol free, the product is not harsh and therefore, in addition to the disinfection of surfaces, is ideal for hand disinfection, yet at the same time giving you complete protection.
