## VENEER OCCLUSIONVD COMPOSITE

### UNIQUE HYBRID-ENAMEL SHELLS FOR ANTERIOR AND POSTERIOR RESTORATIONS

Thanks to the unique laser-sintering manufacturing process, the translucent enamel and occlusion shells (VENEER & OCCLUSIONVD) stand out for their inorganic, ceramic-like surface through a process of vitrification and tempering of the composite body.

The VENEERS and OCCLUSIONVDs represent the anatomic foundations for single or complete reconstructions and for increasing the vertical dimension in the posterior region. Hence, a functioning anterior cuspid guidance can also be obtained using edelweiss VENEERS & OVDs.

*The difference lies in it's similarity with nature!*
